Sequence 6, Application US/09601040A

Patent NO. 6730657;
GENERAL IMPORMATION:
APPLICANT: MEDICO, Enzo et al.
TITLE OF INVENTION: Recombinant Proteins from HGF and MSP FILE REFERENCE: 0471-0161P;
CURRENT APPLICATION NUMBER: US/09/601,040A;
CURRENT FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 28
NUMBER OF SEQ ID NOS: 28
SOFTWARE: Patentin version 3.0
SEQ ID NO 6
LENGTH: 717
TYPE: PRT
ORGANISM: Artificial Sequence
CURRENT APPLICATION NUMBER: US/09/601,040A
CURRENT FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 28
SOFTWARE: PatentIn version 3.0
SEQ ID NO 8
LENGTH: 717
TYPE: PRT
ORGANISM: Artificial Sequence
FEATURE:
                                                                                                                                                                                                                                                       RESULT 10
US-09-601-040A-8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁

Sequence 1, Application US/09194326
Patent No. 6306827
GENERAL INFORMATION:
APPLICANT: Kinosaki, Masahiko
APPLICANT: Masanuga, Hiromi
APPLICANT: Masanuga, Hiromi
APPLICANT: Masanuga, Hiromi
APPLICANT: Higashio, Kanji
APPLICANT: Higashio, Kanji
TITLE OF INVENTION: Agent for Preventing and/or Tre.
FILE REFERENCE: FJN-069
CURRENT FILING DATE: 1998-11-24
EARLIER APPLICATION NUMBER: US/09/194,326
CURRENT FILING DATE: 1998-11-24
EARLIER APPLICATION NUMBER: PT/JP98/01221
EARLIER APPLICATION NUMBER: JP 94989
NUMBER OF SEQ ID NOS: 3
SOFTWARE: PATEND DATE: 1997-03-28
NUMBER OF SEQ ID NOS: 3
SOFTWARE: PATEND SAPIENS
FEATURE:
ORGANISM: Homo sapiens

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hepatocyte growth factor precursor - mouse
NyAlternate names: hepapoietin A; Scatter factor
C;Species: Mus musculus (house mouse)
C;Jate: 03-Mar-1993 #sequence revision 26-May-1994 #text\_change 09-Jul-2004
C;Accession: JC2117; PC2064; A60185; S43416; S45521; S17173; S10966; I48758; JU0231

A;Molecule type: protein
A;Residues: 20-25 <LIJ>A;Accession: S48203
A;Molecule type: protein
A;Residues: 22-27 <LI2>C;Comment: Plasminogen is converted into plasmin by plasminogen activators, both plasmin mediately after dissociation from the clot. In the presence of the inhibitor, the activation involves also removal of the activation peptide.
C;Comment: Stromelysin 1 (see PIR:KCMSS1) acts on plasminogen to produce angiostatin. The string solid tumors.
C;Function:
C;Function:
C;Function: dissolves the fibrin of blood clots; acts as a proteolytic factor in a very state of the careful of 
  ns the walls of A; Pathway: fibr C; Superfamily:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT
